# Aire fresco para una controversia añeja

- CFE reportó cómputos agregados de consejos distritales

$$V = \sum_{d=1}^{300} v_d = 9.6M \quad (50.3\%)$$

- 30 años sin evidencia sistemática  
destrucción paquetes impide verificar si

$$\sum_{casillas} v_c \stackrel{?}{=} V$$

# Aire fresco para una controversia añeja

- CFE reportó cómputos agregados de consejos distritales

$$V = \sum_{d=1}^{300} v_d = 9.6M \quad (50.3\%)$$

- 30 años sin evidencia sistemática  
destrucción paquetes impide verificar si

$$\sum_{casillas} v_c \stackrel{?}{=} V$$

# Aire fresco para una controversia añeja

## El argumento de Salinas

- 1 la suma de votos en actas le dan la victoria
- 2 100 % de las actas disponibles en Lecumberri

## Data original

- Fotos digitales de las actas de escrutinio ( $N \approx 53k$ )
- Análisis de (2) confirma que (1) es cierta  
→ descarta manipulación centralizada
- Pero también evidencia un fraude de gran escala y cómo se instrumentó
- *Convolutional neural networks*

# El procedimiento CNN

Analogía: el nervio óptico  
estímulo de cada región visual  
dispara una neurona específica (un  
pixel)

Entrenamiento para reconocer

- 1 número fidedigno 
- 2 alterados con malicia  
(rayaduras, superposición. . . )
- 3 tachones bienintencionados

Sigue *machine learning*

FIGURE 1. Examples of Vote Tallies with Alteration in Their Numbers. Mexico, 1988

# Operaron los gobernadores

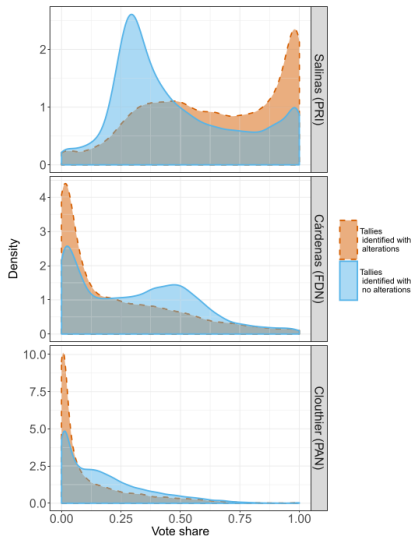

FIGURE 3. Rates of Tallies Classified as Altered by State

Notes: This figure shows the proportion of tallies in every state classified by the CNN as altered.

Tasa de error: falso positivo  $\approx 0.07$     falso negativo  $\approx 0.15$

**FIGURE 4. Distribution of Vote Shares for Each of the Candidates. Mexico, 1988**

**FIGURE 5. Total Number of District Votes for Presidential and Legislative Elections. Mexico, 1988**

**Notes:** The plot shows the total number of votes for the 1988 presidential and legislative elections in every district reported by electoral authorities (Comisión Federal Electoral 1988). The size of each bubble is the rate of tallies identified with alterations by the CNN model.

**TABLE 2. Explaining the Characteristics of the Altered Vote Tallies. Mexico, 1988**

|                              | <i>Dependent variable: Altered Vote Tally</i> |                      |                      |
|------------------------------|---|----------------------|----------------------|
|                              | (1)   | (2)                  | (3)                  |
| No opposition representative | 0.236***<br>(0.026)                           | 0.232***<br>(0.026)  | 0.231***<br>(0.026)  |

| States                       | 32  | 32                   | 32                   |
| Log likelihood               | -24351.38                                     | -24345.84            | -24343.38            |
| $\chi^2$                     | 89.55   | 101.24               | 108.94               |

*Notes:* Entries are logistic regression coefficients and standard errors. The dependent variable is a binary indicator for a vote tally was classified as altered. \*\*\* is significant at the 0.1% level; \*\* is significant at the 1% level; and \* is significant at the 5% level.

# Balance: el estudio sistemático del fraude

## Análisis sistemático confirma

- *Caída del sistema* no instrumentó un fraude centralizado desde Bucareli
- sí permitió alterar  $\sim 30\%$  actas previo al cómputo distrital, inflando voto Salinas
- Operación de fuerza bruta por gobernadores "talentosos"
- ¿CSG se robó la elección o sólo amplió el margen?
- Obsesión con el fraude  
1997–2024 quizás matiza

¡Gracias Francisco!
