- **La respuesta**

Versión ultra-compacta

- **La pregunta**
¿importa el número de partidos en el gobierno?
¿cómo y por qué?
- **La respuesta**

Versión ultra-compacta

- **La pregunta**
¿importa el número de partidos en el gobierno?
¿cómo y por qué?
- **La respuesta**
sí importa
más partidos en el gobierno → más gasto
(efecto independiente de la fragmentación)

El argumento

- Conc:

El argumento

- Conc: incluso si representa el mismo conjunto de intereses, el gobierno multipartidista se comporta diferente del monocolor
1. “El gobierno democrático es gob. de coalición”: hay coaliciones cortas y largas
 2. Gob. monocolor se responsabiliza del conjunto de políticas públicas, procura a la coalición (larga) que representa en su conjunto – *brand name*
 3. Un integrante de coalición corta, en cambio, se responsabiliza sólo de pol. púb. de su cartera – elige la que más reeditúa con sus representados

Senor

Dos Bocas

El argumento (cont.)

4. La diferencia radica en la naturaleza del gobierno: partidos exigen carteras en áreas de rédito electoral; imposible atarse las manos (*cf.* Laver y Shepsle 1990)
5. El diferencial de responsabilidad se manifiesta en el gasto público

Prueba

- Hipótesis: ceteris paribus, el tamaño del sector público se asocia directa y sistemáticamente con el número de partidos en el gobierno
- DV = gasto público / PIB (anual)
IV = N partidos en el gobierno
= N rezagada
= controles

TABLE 2 Effect of Number of Parties in Government on Size of Public Sector Dependent Variable: Total Government Outlays as Percent GDP
