

## Ecuación 1

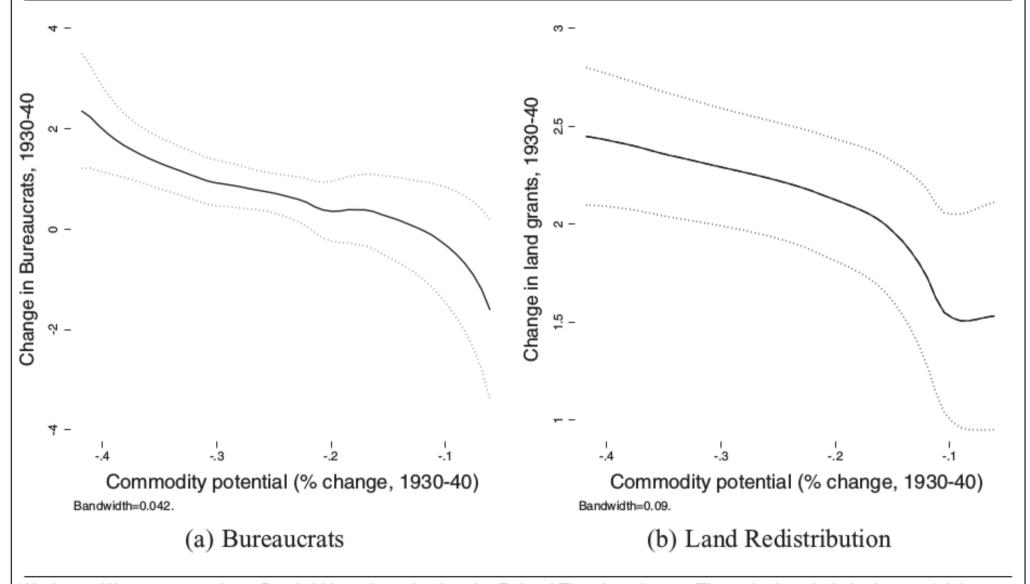

$$lny_{it} = \alpha + \beta_1 ln \bar{V}_{it} + \lambda_t \times X_{i,1930} + \lambda_t + \gamma_i + \varepsilon_{it},$$

•  $y_{it}$  = N burócratas ó tierras expropiadas

• 
$$\bar{V}_{it} = \sum_{g=1}^{G} \frac{\bar{P}_{gt} \times Suitability_{ig}}{Avg. Suitability_{g}}$$
,

•  $Suitability_{ig} = capacidad del municipio i para producir cultivo g (ton/Ha, FAO)$ 

FIGURE 3. Bureaucrats, Land Redistribution, and Commodity Potential (1930–40) Negative commodity shocks increase bureaucrats and land redistribution.

Nadaraya-Watson regressions. Bandwidths selected using the Rule of Thumb estimator. The unit-of-analysis is the *municipio* year. *Municipios* with *haciendas*.
